Case Study - Sentiment Analysis

June 15, 2019

---

*You are currently looking at **version 1.0** of this notebook. To download notebooks and datafiles, as well as get help on Jupyter notebooks in the Coursera platform, visit the Jupyter Notebook FAQ course resource.*

Note: Some of the cells in this notebook are computationally expensive. To reduce runtime, this notebook is using a subset of the data.

1 Case Study: Sentiment Analysis

1.0.1 Data Prep

In [1]:
```
import pandas as pd
import numpy as np

# Read in the data
df = pd.read_csv('Amazon_Unlocked_Mobile.csv')

# Sample the data to speed up computation
# Comment out this line to match with lecture
df = df.sample(frac=0.1, random_state=10)

df.head()
```

Out[1]:
